

# With NEW BI-ANGULAR® Technology!

PATENTEC

## Space Age Design...Health Club Quality.

The NEW EXM-2550S Multi-Station Home Gym features the latest in design advancement for the fitness industry — "BI-Angular Technology™". This new innovation in the science of motion creates the best feeling workout you will ever experience through a controlled and guided converging movement. Our unique patented "X-AGE" system allows the machine to move through a natural plane of motion with the body and eliminates stress and strain on your shoulders, elbows and wrists while maximizing muscular development. A similar principal is applied to our "perfectized" station that allows you to simulate the dumbbell fly while your resistance remains constant throughout the entire exercise movement. In short, the EXM-2550S removes all of the guesswork from your workout routine by creating several biomechanically correct exercise stations that allow you to target all six major muscle groups in the comfort of your own home, on your own schedule.

"BI-Angular Technology™" is featured in major health club chains across the nation and now Body-Solid has found a way to bring the Health Club home to you. The synchronous function of superb design, industrial grade sealed ball bearing pulleys, aircraft quality cable, 12 gauge steel and iron are all working together to create a machine that will last you as long as its warranty. Lifetime Manufactured with precision to set the new standard of satisfaction for the workout world, the EXM-2550S is the leader in its class.

### EXM-2550S Multi-Station Gym

#### OPTIONAL

##### Leg Press / Calf Raise Station

Operates on a 2 to 1 ratio that turns your 210 lb weight stack into an awesome 420 lbs of maximum resistance. Rides on a second sealed ball bearing system for the ultimate in strength, durability, and factor-free performance. Ideal for working quadriceps, glutes and calves.

LP-255

#### OPTIONAL

##### Vertical Knee Raise / Dip Station

Specially contoured and extremely comfortable backrest and arm pads support your body so your abdominal muscles are isolated and fully exercised. Attached Dip Station is great for developing your chest, shoulder and arm muscles.
